

Energy Efficiency Upgrades Will Help Anadarko Save Over 19 Million Kilowatt-Hours of Electricity by 2028.

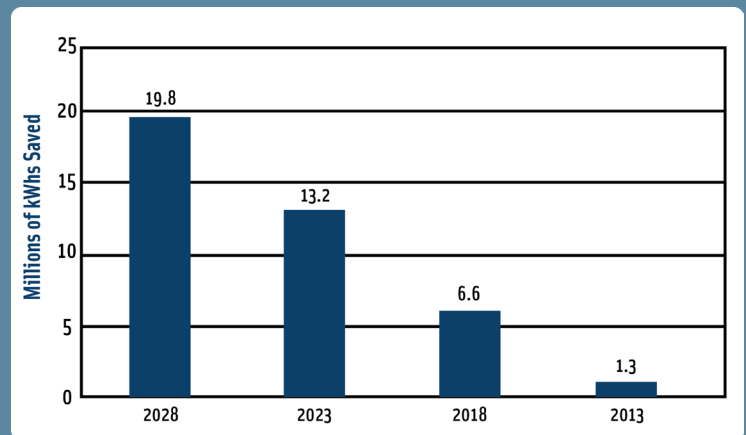

The Entergy Texas Commercial Solutions Program – which helps organizations improve energy efficiency – provided Anadarko with technical support and a \$61,519 incentive that enabled the oil and natural gas exploration and production company to cost-effectively install lighting- and cooling-system upgrades that will save 1,320,411 kilowatt-hours of electricity per year.

According to the U.S. Environmental Protection Agency, the electricity that Anadarko will save each year as a result of the upgrades is equal to:

- Eliminating the annual greenhouse gas emissions from 192 passenger vehicles
- The amount of carbon that's sequestered by more than 740 acres of US forest

By 2028, the upgrades will have cut Anadarko's total electricity consumption by more than 19.8 million kilowatt-hours as illustrated in the chart to the right.
